

POWERGEN Africa

14–16 May 2019

POWERGEN Africa 2019 and the co-located African Utility Week represent a global meeting place for the continent's power, energy and water value chain.

First launched in 2012 in Johannesburg, POWERGEN Africa addresses the growing demand for the delivery of secure energy services to rapidly expanding economies across the African continent. It also offers the power industry opportunities to make positive change in the region.

With an expected audience of more than 10 000 technical experts, this year's event will focus on power generation, transmission and distribution, new technologies and water. It will also focus on issues facing the electricity generation industry.

Host partners include the Department of Energy and the City of Cape Town.

POWERGEN Africa takes place at the Cape Town International Convention Centre from 14–16 May 2019.
